EDUCATION

Vellore Institute of Technology, Chennai

Expected 2029

B.Tech, Computer Science and Engineering | CGPA 8.69/10

Relevant coursework: Data Structures & Algorithms, Operating Systems, DBMS, OOP, Theory of Computation

EXPERIENCE

Technical Director, 180 Degrees Consulting, VIT Chennai

08-2026 – Present

- Lead technical work for a student consulting organization, owning its web platforms, infrastructure, and internal tooling for 25 members.
- Built and maintain the organization's admin platform (below), turning workflow requirements into shipped features.

PROJECTS

Synapse: Real-Time Collaborative Document Editor

<https://github.com/Kevin272-dot/Synapse>

- Built a Google Docs-style editor with live multi-user editing, cursors, sharing, folders, and owner/editor/viewer roles.
- Implemented a custom Operational Transformation engine over Socket.IO with durable version history, replay-based reconstruction, and automated convergence tests.
- Added AI-generated summaries, flashcards, quizzes, and knowledge graphs.

Stack: TypeScript, Next.js, React, TipTap, Node.js, PostgreSQL, Prisma, Vitest

180 Degrees Consulting Admin Platform

<https://github.com/180DC-VIT-CHENNAI/180dc-admin-website>

- Developed and maintained a production platform used by the chapter for ~5 months, supporting 100 members and board users.
- Built authentication, role-based access, token-based login, backend APIs, and cloud deployment.

Stack: TypeScript, React, Vite, Hono, Cloudflare Workers (D1, R2, KV, Queues), Clerk, Turborepo

V-Vortex: Hackathon Management Platform

<https://github.com/V-Vortex-VIT/V-Vortex-Hackathon>

- Built and deployed a full-stack platform for registration, team formation, problem-statement selection, scorecards, and real-time leaderboards.
- Used at V-Vortex / 500 participants].

Stack: React, TypeScript, Vite, Supabase, PostgreSQL, Edge Functions, Vercel

Self-Hosted MCP Server

<https://github.com/Kevin272-dot/MCP>

- Built a Model Context Protocol server (JSON-RPC 2.0) with tool discovery and execution for file-system, PDF, and browser automation.
- Added sandbox protections against path traversal, absolute-path access, and symlink escapes, plus a React Flow dashboard to visualize request lifecycles.

Stack: TypeScript, Next.js, Node.js, Puppeteer, React Flow

Smart Plant Monitoring System

<https://github.com/Kevin272-dot/smart-plant-monitoring-system->

- Built an ESP32 IoT system tracking temperature, humidity, soil moisture, and light on a real-time React dashboard.
- Implemented a predictive plant-health model for watering recommendations, with daily reports and Twilio SMS alerts.

Stack: ESP32, React, TypeScript, Supabase, Edge Functions, Python, Twilio

TECHNICAL SKILLS

Languages: C++, C, Python, Java, JavaScript, TypeScript, SQL

Frameworks and libraries: Next.js, React, Node.js, flask, Tailwind CSS

Systems: Operational Transformation, Real-Time Systems, Socket.IO, Distributed Systems, Concurrency

Cloud & Data: AWS (EC2, ECS Fargate), Cloudflare Workers, Redis, PostgreSQL, Supabase, Turborepo

AI/ML: PyTorch, scikit-learn, PennyLane

Tools: Git, GitHub
